

Risk visibility

Rapid deployment

Customisable

On-premise or SaaS

Intuitive

Low cost of ownership

## STREAM Integrated Risk Manager

STREAM is a fast, flexible, scalable and easy to use risk management platform. It provides unrivalled management level visibility into your risk and compliance status in a way that just isn't possible with spreadsheets or individual security technologies.

STREAM captures, correlates, aggregates and presents all of the management information required for:

- Risk-based compliance with regulations and standards, such as **ISO 27001**, **GDPR**, **PCI-DSS**, **NIST Cyber Security Framework** and **COSO**
- Risk-informed decision making
- Risk reporting, in the language of business leaders.

"STREAM Version 5 is a complete game-changer"

Chief Risk Officer, Midland States Bank, USA

## Do you recognise these challenges?

- Seeing clearly the status of key risks to the business
- Managing and mitigating exposure to data breaches
- Demonstrating a diligent approach to protecting information such as personal data
- Maintaining compliance with multiple regulations, control standards and contractual obligations
- Demonstrating accountability for risk acceptance and actions
- Communicating risk information to business leaders
- Operating efficient processes for managing risk, compliance, vulnerabilities, incidents and other events

## Cyber Risk Management

A risk-based approach to cyber security is required by most current regulations and standards, such as GDPR, ISO 27001 and the NIST Cyber Security Framework.

Effective cyber risk management requires visibility of the multiple and sometimes complex relationships between risks, controls, vulnerabilities, incidents, audit findings and actions in relation to assets, business processes and objectives.

**STREAM captures, correlates and aggregates information to provide unrivalled management-level visibility of risk and compliance status allowing business leaders to make risk-informed decisions and set risk-based priorities for action.**

Evidence and history is retained to demonstrate a diligent risk-based approach to customers, regulators and other stakeholders.

## Main Features

### Risks

- Configurable risk registers and risk assessment schemes
- Automation to identify known risks and map relevant controls
- Automated and manual estimation of risk
- Easy visibility of all correlations and contextual information on which to make risk-informed decisions
- History of all risk assessments and acceptances

### Controls

- Manual and automated assessment of controls and related metrics/KPIs
- Automation to map controls to relevant assets/business processes
- Support for multiple cross-related control frameworks
- Automatic scheduling of checks and updates
- History of all control assessments and approvals

### Vulnerabilities

- Import from vulnerability scanning tools and penetration tests

- Prioritisation of remediation actions with auto-assignment to owners, escalation and reporting

### Events

- Unlimited Event types with user definable fields, e.g. for incidents, near-misses, issues, threat intelligence
- Correlate events to risks, controls, assets and actions

### Audits

- Record audit findings and correlate with risks, controls, assets and actions

### Actions

- Integrated action management across all risks, controls, vulnerabilities, assets, events and actions

### Workflow

- Configurable workflow with scheduling and email alerting

### Dashboards and Reporting

- Business Dashboards showing 'at a glance' summary views with easy navigation, aggregation and drill-down
- Rich set of graphical reports with extensive user-definable custom reports
- Integration with Business Intelligence tools for enhanced reporting

## Integrated Risk Management

STREAM is optimised for the demanding requirements of cyber risk management and enterprise risk management but can also be configured for a wide range of other risk and compliance applications.

## Customers

## Business Benefits

The risk visibility provide by STREAM allows our users to make the right risk-informed decisions to protect their businesses and to take advantage of new digital business opportunities.

Reduced risk of losses and reputational damage from data breaches and other events

Evidence of a diligent risk-based approach for customers, regulators and other stakeholders

Help the business to securely exploit the benefits of digitalisation

Efficient processes for managing risks, compliance, incidents, vulnerabilities and actions

**“The risk-based approach and importantly the visibility provided by STREAM enabled the NHS Wales Information Services to outbreak on the core national infrastructure in Wales”**

Cyber Security Compliance Lead, NHS Wales Information Services

**“The software itself is very user friendly, particularly the new version 5”**

Loss Control Manager, Itaú Corredor de Seguros, Columbia

**“Having ditched the spreadsheets, ZEISS now manages risks and controls easily and efficiently to match its own in-house standards of business from using a single platform accessible to a large number of employees across the business”**

Regional Information Security Officer, Carl Zeiss AG, Germany

## SC Magazine Risk and Policy Management Review, November 2017

"This is a traditional GRC-style risk management tool with a few really nice features added to improve efficiency through automation."

"You can set up your own dashboards that provide information on your projects and deadlines. Drill-down from the dashboards is very good as is the level of detail available. For example, drilling down to a specific asset reveals its compliance against your selected standards. These risk pages are exceptionally detailed, and everything is configurable. Connectors to major vulnerability scanning tools are included and results can be imported directly into STREAM and automatically linked to assets."

"Reporting is comprehensive and in addition to the large number of reports supplied out of the box, users can create their own, simply and quickly. The custom report generator is very simple. The user picks a report type - e.g., risk - and clicks on the fields he or she wants and the tool does the rest. The database is snapshotted automatically monthly or more frequently if user chooses. This allows trending."
